

MIDUS 2 Project 5 (Neuroscience)

MIDUS 2 Project 5 (Neuroscience)

Abstract

The Neuroscience study is Project 5 of the MIDUS longitudinal study, a national survey of more than 7,000 Americans (aged 25 to 74) begun in 1994. The purpose of the larger study was to investigate the role of behavioral, psychological, and social factors in understanding age-related differences in physical and mental health. With support from the National Institute on Aging, a longitudinal follow-up of the original MIDUS samples [core sample (N = 3,487), metropolitan over-samples (N = 757), twins (N = 957 pairs), and siblings (N = 950)] was conducted in 2004-2006. Guiding hypotheses, at the most general level, were that behavioral and psychosocial factors are consequential for health (physical and mental). A description of the study and findings from it are available on the MIDUS Web site. The Neuroscience Project of MIDUS 2 contains data from 331 respondents. These respondents include two distinct subsamples, all of whom completed both the Project 1 Survey and the Project 4 Biomarker assessment at University of Wisconsin-Madison: (1) longitudinal (n = 223) and (2) Milwaukee (n = 108). The Milwaukee group contained individuals who participated in the baseline MIDUS Milwaukee study, initiated in 2005. The purpose of the Neuroscience Project was to examine the central circuitry associated with individual differences in affective style that represent a continuum from vulnerability to resilience, and characterize some of the peripheral consequences of these central profiles for biological systems that may be relevant to health. The primary aims were to: (1) characterize individual differences in both emotional reactivity and emotional recovery using psychophysiological measures such as corrugator electromyography and eyeblink startle magnitude, (2) characterize individual differences in brain morphology, in particular amygdala and hippocampal volume, using structural magnetic resonance imaging (MRI), (3) characterize individual differences in activity within the neural circuitry of emotion regulation using both electroencephalography and fMRI, and (4) test the ability of the central indices in this project to predict the comprehensive array of health, cognitive, psychological, social, and life challenge factors assessed in the other MIDUS projects. To probe individual differences in emotional reactivity and recovery (a key component of regulation) the Neuroscience Project examined both psychophysiological and fMRI measures during the presentation of emotional (positive and negative) and neutral pictures, and these same measures during a post-picture period. The logic of this strategy is that continued activation during the recovery period following a negative stimulus is indicative of poor automatic emotion regulation. Respondents in the Neuroscience Project are a representative subsample of the MIDUS 2 survey sample (#4652).

Label

EBR negative magnitude at early probe

Comparability Class

Format Difference - Difference exists among waves due to changes in question format or questionnaire layout.

Comparability Notes

Slight differences in timing of startle probe. Data processing procedures were adapted to account for timing differences between waves. See MR_P5_INSTRUMENTS.doc for further details.

Label

EBR negative magnitude at late probe

Comparability Class

Format Difference - Difference exists among waves due to changes in question format or questionnaire layout.

Comparability Notes

Slight differences in timing of startle probe. Data processing procedures were adapted to account for timing differences between waves. See MR_P5_INSTRUMENTS.doc for further details.

Label

EBR positive magnitude at mid probe

Comparability Class

Format Difference - Difference exists among waves due to changes in question format or questionnaire layout.

Comparability Notes

Slight differences in timing of startle probe. Data processing procedures were adapted to account for timing differences between waves. See MR_P5_INSTRUMENTS.doc for further details.

⋘ B5BPLM

Label

EBR positive magnitude at late probe

Comparability Class

Format Difference - Difference exists among waves due to changes in question format or questionnaire layout.

Comparability Notes

Slight differences in timing of startle probe. Data processing procedures were adapted to account for timing differences between waves. See MR_P5_INSTRUMENTS.doc for further details.

🤏 B5BNEA

Label

EBR negative amplitude at early probe

Comparability Class

Format Difference - Difference exists among waves due to changes in question format or questionnaire layout.

Comparability Notes

Slight differences in timing of startle probe. Data processing procedures were adapted to account for timing differences between waves. See MR_P5_INSTRUMENTS.doc for further details.

Label

EBR negative amplitude at mid probe

Comparability Class

Format Difference - Difference exists among waves due to changes in question format or questionnaire layout.

Comparability Notes

Slight differences in timing of startle probe. Data processing procedures were adapted to account for timing differences between waves. See MR_P5_INSTRUMENTS.doc for further details.

™ B5BOEA

Label

EBR neutral amplitude at early probe

Comparability Class

Format Difference - Difference exists among waves due to changes in question format or questionnaire layout.

Comparability Notes

Slight differences in timing of startle probe. Data processing procedures were adapted to account for timing differences between waves. See MR_P5_INSTRUMENTS.doc for further details.

№ В5ВОМА

Label

EBR neutral amplitude at mid probe

Comparability Class

Format Difference - Difference exists among waves due to changes in question format or questionnaire layout.

Comparability Notes

Slight differences in timing of startle probe. Data processing procedures were adapted to account for timing differences between waves. See MR_P5_INSTRUMENTS.doc for further details.

₱ B5BOLA ■ B5BOLA ■

Label

EBR neutral amplitude at late probe

Comparability Class

Format Difference - Difference exists among waves due to changes in question format or questionnaire layout.

Comparability Notes

Slight differences in timing of startle probe. Data processing procedures were adapted to account for timing differences between waves. See MR_P5_INSTRUMENTS.doc for further details.

Label

EBR positive amplitude at early probe

Comparability Class

Format Difference - Difference exists among waves due to changes in question format or questionnaire layout.

Comparability Notes

Slight differences in timing of startle probe. Data processing procedures were adapted to account for timing differences between waves. See MR_P5_INSTRUMENTS.doc for further details.

% B5BPMA

Label

EBR positive amplitude at mid probe

Comparability Class

Format Difference - Difference exists among waves due to changes in question format or questionnaire layout.

Comparability Notes

Slight differences in timing of startle probe. Data processing procedures were adapted to account for timing differences between waves. See MR_P5_INSTRUMENTS.doc for further details.

Label

EBR positive amplitude at late probe

Comparability Class

Format Difference - Difference exists among waves due to changes in question format or questionnaire layout.

Comparability Notes

Slight differences in timing of startle probe. Data processing procedures were adapted to account for timing differences between waves. See MR_P5_INSTRUMENTS.doc for further details.

Pre-Question Text

In this series of questions we are interested in learning about your beliefs and feelings about the world, as well as some of your typical day-to-day actions. Each item below contains a statement. We want to know how strongly you agree or disagree with each of these statements. Think about each statement separately, and decide how much you agree with it. There are no right or wrong answers. For each statement, circle the number on the right for the number from 1 (strongly disagree) to 7 (strongly agree) that best represents your feelings.

Value	Label	Frequency	%

Pre-Question Text

This scale consists of a number of words that describe different feelings and emotions. Read each item and then mark the appropriate answer in the space next to that word. Indicate to what extent you feel this way RIGHT NOW, that is, AT THIS VERY MOMENT. Use the following scale to record your answers.

Value	Label	Frequency	%
1	VERY SLIGHTLY OR NOT AT ALL	7	2.1%
2	A LITTLE	16	4.8%
3	MODERATELY	66	19.9%

Pre-Question Text

Please rate each of the following statements by circling the number next to each statement. You should make your ratings using the scale described below in terms of how much you agree or disagree with the statement as a general description of yourself. Do not make your ratings in terms of how much you agree or disagree with the statement right now.

Pre-Question Text

A number of statements which people have used to describe themselves are given below. Read each statement and then circle the appropriate number to the right of the statement to indicate how you generally feel. There are no right or wrong answers. Do not spend too much time on any one statement, but give the answer which seems to describe how you generally feel.

ERQ01-When I want to feel more positive emotion (such as joy or amusement), I change what I?m thinking about

Pre-Question Text

We would like to ask you some questions about your emotional life, in particular, how you control (that is, regulate and manage) your emotions. The questions below involve two distinct aspects of your emotional life. One is your emotional experience, or what you feel like inside. The other is your emotional expression, or how you show your emotions in the way you talk, gesture, or behave. Although some of the following questions may seem similar to one another, they differ in important ways.

Value	Label	Frequency	%
